

Jaguar

The Family Enterprise Since 1933

COMPANY PROFILE

WELCOME TO THE LAND OF GIFTS

There are some objects that give us satisfaction and make us stand out. What we surround ourselves with influences who we are, it is the image of our personality and our second skin. We are here to provide you with items that you'll love to own! Almost 100 years of experience make us what we are - we have been producing leather goods since the 1930s, continuing the family tradition.

We create *products free from excess, beautiful in its simplicity* and yet fulfilling their function. We are driven by a passion for creating elegant, practical and innovative products. Inspired by the beauty of people, their true lives and dreams, we create unique and sophisticated things, especially for them. We strongly believe that the goods that we provide have soul, because each of them is made by hand, and *their definite and unique shape reflects the artistry of our craftsmen.*

HANDCRAFT & TECHNOLOGY

Modern production methods allow us to achieve *maximum effect with a minimum of materials used*. Our products are being produced with the highest quality sewing machines. Manual work as well as advanced technologies, including computerised stitching allow us to be highly effective in implementing even the most daring ideas in life. This ensures that each product has a unique and modern look while guaranteeing long durability.

Both manual and digital processes require experimentation and are refined through experience, knowledge and skills. In the past, products were sketched on paper, and then the prepared patterns were transferred to the leather and cut by hand. Today high-tech robots, based on uploaded diagrams, can effectively plan every centimetre of leather and, out of concern for the natural environment, make the best use of it.

The sewing robots can sew even the most sophisticated shapes with high precision, still though in cooperation with our experienced craftsmen. *A perfect symbiosis that results in beautiful objects*. The harmonious cooperation of machines and the craftsmanship of our masters allow us to provide you with unusual, sophisticated items. Although times change, one thing remains constant - **REAL PEOPLE are always at the core of the craft**.

Innovation is essential for development, but preserving traditional craft techniques is extremely important. Without them, none of our designers would be able to develop in their specialised areas. **AT EUREKA, WE USE TECHNOLOGY TO ENHANCE TRADITIONAL TECHNIQUES, NOT TO REPLACE THEM**. We value the harmony of technology and craftsmanship working together and we follow this path!

90 YEARS

We started in the **30s of the 20th century** as a small family business, specialising in leather harnesses for horses. Such a product was very much needed at the time, as horses were omnipresent, owned by many people and serving for transport and labour purposes. The experience and craftsmanship our ancestors gained and passed on to future generations during the decades of their work resulted in the company's constant growth, leading to what we are nowadays.

In the early 90s, ***we decided to focus on leather goods***. The thought of producing high-quality items for everyday use that accompany everyone everywhere was and is very enjoyable and motivating up to this day.

MADE IN EUROPE

Our products are made of genuine top-grade natural leather and they are a combination of modern aesthetics, optimal functionality, and high quality - providing all the necessary features for your everyday use. Products manufactured in our factory are designed down to the smallest detail. We carefully select materials, threads and decorations. We use polyester thread of special resistance to abrasion and ageing. The leathers that we use meet all the REACH (Registration, Evaluation, Authorisation and Restriction of Chemicals) requirements in compliance with the standards of the European Union's environmental and health regulations.

The quality of hand-crafted products is incomparable to mass production. A machine will never be able to evaluate such a subtle feature as the aesthetics of a product, and it will never be able to replace the judgment of the human eye and hand. Therefore, having the skills and ideas in our heads, ***we developed our own technology and procedures of production.*** Every item we offer is manufactured exclusively by our craftswomen and craftsmen who work in the production hall. We believe in personally taking care of every single step of the production process. By choosing our products ***you can be sure that you're choosing European, tradition-based products*** made of the highest quality materials.

DESIGN LIKE NO OTHER

The concept comes first and we care a great deal about its uniqueness. It's our policy to stand out from the immeasurable mass of "copies of copies". During the production process, we do not only rely on the work of careful human hands. Our team of designers enables us to create outstanding designs from scratch, and bespoke manufacturing *provides our customers with customised and unique products, that are tailored to their specific, individual needs.*

It is of great importance to us to keep the design process creative and bold. We're constantly looking for innovative ways of solving problems and challenges and very often come up with a solution that's different from what's already on the market. These smart solutions and the usage of materials have become our trademarks, which we are very proud of and excited about. Therefore a lot of *our designs are registered and copyright protected.* We provide our customers with exclusive products of premium quality and flawless finish that they won't find anywhere else.

SAFETY FIRST

EUREKA offers *RFID-blocking technology, helping to protect credit cards, debit cards, and IDs from identity theft and electronic pickpockets.* The finished leather product is durable and looks great, giving its user an extra touch of class and sophistication. Its card slots and aluminium case make organization easy, while the slim size ensures that the pocket of the owner won't be overstuffed.

The aluminium case is designed with a "pul" mechanism of gradual card ejection, which is very much appreciated for its convenience. This mechanism allows for a slow and controlled release of cards from the wallet, making it easier for the user to access their cards without struggling to pull out a single card or a bunch of cards at once. *Our test results showed that even after 100,000 pulls the "pul" mechanism works as expected.*

Our line of minimalist wallets with RFID protection is constantly developing with new solutions and is genuinely appreciated by our customers.

SUSTAINABLE DEVELOPMENT

The protection of the environment is a very important issue that must be faced uncompromisingly, in such a way that the environment and the health of people and nature are not harmed. Waste management, transport, logistics and emissions are things that we particularly focus on.

EUREKA strives to protect natural resources, and more particularly to apply a policy aimed at reducing energy and packaging and recycling of the resources used.

REACH

We guarantee that the goods we offer meet the requirements of Directive 1907/2006/EC of the European Parliament and the Council. The structures of the European Union, by publishing a list of prohibited substances, impose an obligation on manufacturers and importers to avoid them. To ensure customers about the safety of the materials we use, we carry out tests analysing the chemical composition of products for these substances.

PACKAGING

„Disposable“ is today synonymous with trashiness and cheapness. Disposable packaging and disposable products litter our planet. There is no doubt that most products require packaging. To reconcile the needs of the market with ecology, without causing excessive pollution on the environment, we use packaging made of cardboard, wood or recyclable plastics.

RECYCLING

As a family business that has been operating on the market for three generations, we deeply respect the tradition of craftsmanship. We are aware of the processes and constant changes in our planet's ecosystem, that's why the production waste we produce is recycled. To additionally join the process of reusing the materials, we offer collections of products made of recycled leather and fabrics.

CE SAFETY CERTIFICATE

All our products, in accordance with the requirements of the European Union directives, have a CE safety certificate. By using our offer, you contribute to increasing safety among your customers.

OUR PRODUCTS

THE LEATHERS

We only use materials of European origin. Quality has its price, therefore with no compromise we choose the best suppliers. Materials that we use are made in Germany, Italy and Poland.

PRIMAVERA LEATHER

Primavera leather, also known as a long-lived one, is a full-grain pull-up leather of the highest quality. It has been soaked with oil, thanks to which the wallet changes its appearance over time. It lightens in its folds and easily scratches, creating a natural vintage look. However, it is possible to restore its original appearance by polishing.

SADDLE LEATHER

Saddle leather is a material processed with plant-based tanning substances, used to manufacture high-quality, comfortable saddles. It gains its water-resistant yet elastic properties thanks to the thin layer of wax which, when heated up, soaks into the leather's structure. Over time and due to usage, the leather changes - it gets scratched, its colour transforms in the folds, and a rich patina is developed. It is appreciated for its raw beauty, durability, and versatility, and is used not only for saddles but also for a whole variety of leather products.

SPECTRO LEATHER

Spectro leather is a fully ecological material with a soft-touch surface. The combination of natural rubber and recycled, milled leather is a guarantee of full water- and dirt resistance. Products made of Spectro leather are perfect for e.g. restaurants with outdoor tables.

ITALIA LEATHER

Italia leather is a modern half matte-finish leather, which is available in a wide range of vibrant colours. The surface of the leather has been sprayed with a colour of aniline dye. Thanks to this, the natural growth marks and the structure of the leather are preserved and still visible on the finished product. This is a unique feature of our natural, full-grain leather. Being a semi-veg-tanned leather, Italia leather is exceptionally soft and pleasant to the touch, yet strong and durable. In addition, the leather has been covered with a water-repellent varnish, which makes it dirt-resistant.

HUNTER LEATHER

Hunter leather is high-quality pull-up leather. Its surface has been polished, soaked in a special oil, and finally coated with a wax that allows the products to age beautifully, which creates a natural worn-out and second-hand look.

OTHER MATERIALS

A close-up photograph of a person's hands, wearing a grey long-sleeved shirt, using red-handled scissors to cut a piece of black material on a workbench. The workbench is covered with a large piece of reddish-brown material, possibly leather or a similar texture. In the background, there are various tools and materials, suggesting a workshop or studio environment.

● WASH PAPER

Wash Paper is a modern, eco-friendly material widely used in the fashion and design world. It is a blend of cellulose and silicone that has a leather-like look and feel and exceptional durability. Wash Paper is washable, which makes it a great material to use for items that need to be maintained and cleaned regularly.

● FELT

Synthetic felt is a durable material made from recycled polyester fibres. It is lightweight, soft to the touch and gives a friendly feel to the products. Its flexibility and ease of moulding make it an extremely versatile material.

● ACRYLATED CANVAS

Acrylated canvas is a durable and easy-care material made from acrylic-impregnated cotton fibres. A robust weight of 250g/m² combined with water-repellent properties ensures that products made from canvas will perform and last in the most demanding conditions.

● PU LEATHER

PU leather is a synthetic material made from biodegradable polyurethane. It most often reproduces the look of natural leather, being its cheaper alternative. However, its properties allow for a wider range of possibilities, as PU leather can resemble e.g. canvas, rubber, rusty sheet metal or even the surface of stone. It requires no special maintenance and is easy to clean.

● DURABLE ALUMINIUM

Aluminium alloy AW-6063 is a durable and lightweight material with high corrosion resistance and excellent extrudability, which means the ability to be formed into complex shapes. Aluminium is a fully recyclable material - it can be recycled over and over again without any loss in the quality of the raw material.

● BIRCH PLYWOOD

Birch plywood is a strong material made by glueing thin layers of wood together. It is easy to work with and allows a wide variety of designs to be created. Birch plywood has a naturally warm yet elegant appearance that can be enhanced by varnishing or staining.

● BAMBOO

For centuries, the natural elegance and durability of bamboo has fascinated people. Products made from bamboo are a blend of nature's harmony and functionality. It grows extremely fast, making it an easily renewable material. This allows for a responsible approach to production that celebrates nature's gifts while preserving the delicate balance of our environment.

PERSONALISATION METHODS

DEBOSSING

Leather debossing is a process that combines tradition, precision and craftsmanship. Brass matrices stamp the leather at a pressure of 100 kg/cm² and a temperature of 130-250 degrees Celsius, creating a three-dimensional effect in the form of a logo or decoration.

HOT-STAMPING WITH COLOUR FOIL

Hot stamping uses thin, coloured foil. Pressure and heat melt the adhesive layer of the foil, which is then permanently applied to the surface of the material. This process can be repeated several times to create different coloured designs.

ENGRAVED BADGE

Decorative panel, made of powder-coated aluminium or brushed stainless steel, with laser-engraved logo. Riveted.

LASER ENGRAVING

Laser engraving is a modern technique (accurate to 0.01mm) used to decorate traditional materials such as wood, leather, felt or metal. A focused laser beam removes the top layer of the material to create a pattern, like text or graphics. It is a very precise method for the permanent decoration and personalisation of products.

THERMAL TRANSFER

This process involves transferring colour graphics or text onto the surface of the product. First, a special printer prints the design onto a transfer film. The design is then applied to the target surface using a high temperature that affects the pigments on the film. This is a popular method that guarantees the durability and high quality of the coloured decoration.

UV PRINT

A technique for printing directly onto objects using ultraviolet light to cure the paint. This process ensures high quality and intensity of colours, as well as durability and abrasion resistance of the branding. UV printing is an excellent choice for frequently used products.

MODIFICATIONS

UV PRINT

UV printing is highly durable and can be used on various materials. Because it can cover a large area, the possibilities go far beyond just a logo. It's also possible to create completely new, artistic, colourful materials.

CREATIVE STITCHING

This is a method in which a single stitch runs smoothly, looping and swirling to form a shape based on a single line. The variety of shapes that can be created is limited only by your imagination. Creative stitching can also be a distinctive addition to a debossed logo.

CALENDERING

Calendering is the process of embossing a large area of material to give it a new texture or pattern. Any design - from a leather or wood pattern to something completely abstract - can be achieved with this method. It's also a great tool for designing your own elaborate materials based on repetitive logos or decorative elements. So why not feel like a famous designer? Products made from this material are sure to be unique.

GEMSTONES

Choose your favourite gemstone from our range and we will apply it to your chosen products for permanent decoration. Each stone is different and unique due to its natural origin and the character of the decoration is timeless. Elegant gemstones add a subtle and sophisticated touch to your gifts.

BUSINESS GIFTS

DISCOVER THE **AMAZING POSSIBILITIES** OF BUSINESS GIFTS!

Looking for personalised business gifts? Choose our products!

We will adapt them to the needs of your clients so that each of them would feel special and taken care of. Business gifts have a huge impact on the image of each of your customers. They build mutual relations and have a positive effect on the company's recognition.

Contact us now!

We will be happy to meet your customer's most individual needs. Discover the joy of cooperation with Jaguar!
